

*ABSTRACT AMENDMENTS*

Replace the Abstract with:

A vehicle towing attachment ~~is to be~~ inserted into a lower portion of a vehicle to be towed ~~and~~ raises and holds wheels when the vehicle to be towed is towed. The attachment has three prongs for retaining a plate spring ~~having the~~ to which a wheel of the vehicle is attached thereon. Since the three prongs are provided on the attachment, shifting of the towed vehicle in the transverse direction and the front and rear direction can be prevented without fail. Even during the course of a towing operation, the towed vehicle can be retained stably and reliably.
